A Healthy Alternative to Coffee

"Eat your Vegetables" is one of the tried and true recommendations for a healthy diet. However, if you are like most people, eating at least 3-5 servings of vegetables can be a challenge.

Finally, **BioCoffee** . . . a convenient source of greens!

With a base of high quality Arabica instant coffee. . .

**It's alkaline – no caffeine - contains vitamins and minerals
- tastes great - and mixes instantly...just add water!**

- **Main Ingredient.** Wheatgrass, with high levels of bicarbonates, alkaline and trace minerals, and oxygen-rich chlorophyll are key to the alkalizing properties.
- **Oligosaccharides.** Another BioCoffee ingredient. They are carbohydrates found naturally in plants such as Jerusalem artichokes, onions, leeks, garlic, legumes, asparagus, & wheatgrass. The undigested portion of oligosaccharides serves as food for the intestinal micro flora.
- **Other Nutrients.** Various vitamins and minerals such as vitamin A, B complex, C,E, K, calcium, iron, phosphorous, zinc, cobalt, and sulphur.

BioCoffee is available at the ReNew Life Wellness Center.

Why is the BioCoffee in sachet packets?

- The sachets are used to seal in the freshness of the wheatgrass
- No preservatives or chemicals
- Sachets protect the ingredients from contamination
- Makes it easy to carry & drink on the go - just add water!
